## **DETAILED ACTION**

## Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claim 1, drawn to a method of manufacturing a semiconductor device, classified in class 438, subclass 197.
- II. Claims 2 and 3, drawn to a semiconductor device, classified in class 257, subclass 288.
- 2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as forming a sacrificial layer over a substrate, said sacrificial layer being formed over a cell window region, patterning said sacrificial layer, forming a layered structure on said substrate and removing said sacrificial layer.
- 3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 4. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
